

As-Garde Technology Continuum

- Pro-Active - The Heart and Soul of Economic Nationalism

I hope to find out the response, the heart and soul, what really is important and how people respond to the series on Economic Nationalism. Response is important, so is initiative and endeavour, with a few people working together more is possible, and as we keep going in that direction, we continue to make real measurable tangible progress, even though it may seem nothing is happening, people get the point, increase in awareness and understanding, and the contrast helps make those decisions easier, more evident in wise, pro-active and empowering choices relevant to each individual.

I am writing more on the economic nationalism, to make it as real as it gets...

Having that contrast and relevant options will also make a more solid citizen and individual, unity makes the power, and faith is a super power, with the kind of confidence to go forward and make dedicated decisions, with moral courage and being able to do the math and understanding the character in the equation is essential for nation building.

Happiness is being part of the solution, and also creating something new beyond problem solving, yet having that awareness of the problems, we can design and build something better. The design engineering and build quest for airplanes, trains, automobiles, boats, defence technology, machinery, tools, equipment, new products such as appliances, advanced manufacturing and assembly, high performance everything, even political party endeavours and revitalized government, is all possible with pro-active economic nationalism.

Imagine, happiness in building something awesome, you the individual made it happen, you helped make it happen, you can and do make a difference. Freedom of choice is in your power, all you need to do is exercise it, actions themselves are good, something pro-active in the direction you are going, aligned with your values is even better. Making decisions is empowering, being pro-active, actually doing something is like a super power. Faith is a super power, and faith can be increased, like confidence, physical and moral courage, with action, the right thoughts, the right words, almost like magic, physics, meta physics and multi-dimensional physics.

Having that simple confidence and trust of going forward, making a decision, backed up with action, energized action, focused and dedicated action, determined action, action based on free will, a freely chosen purpose, goal, plan and vision, which can be simple or more comprehensive, like a national security, civil defence and defence technology endeavours. Is that something you could recognize if you see it and know about it? Is a national security emergency something that you are aware of and compelled and motivated to do something about, regardless of who you are and what you have, notwithstanding "credentials" "title" "resources" "social status" "money" "power" or anything else that keeps you from going forward?

Make effort not excuses, is that relevant to you? Do you need a little or a lot of encouragement, the right crowd, the right friends, the right environment? What do you think you need that you believe you don't have that keeps you from going forward? Initiative, endeavour, go in that direction, go by faith. Even though you may have what appears to be a valid excuse, or reason for not doing something, if you look for reasons to go forward, you will find those reasons. Purpose fueled with energy, duty, loyalty, valour, integrity, vision, real needs and ideals are all essential to integrate in aligning values with purposeful action.

Imagine what that feels like, imagine, what can you do today that could make your dreams come true, that your plan will succeed and be more successful. Imagine what boldness and audacity, or even something simple, to assert your independence, autonomy, free will, what would that be? Make a plan, work the plan, how simple can it be? Is that wise? Change your plan, keep going in the direction you choose, that vision, the future you envision, dedicated to alternate reality creation, transforming thought into reality.

The individual can actively plan for alternate reality creation, that is the future, to create the future. The individual can do that for personal plans, family plans, enterprise plans, industry plans, nation economic industrial plans, national and civil defence plans, plans for a revitalized awesome Made in Canada future that begins right here and right now. Individual effort is essential, how do you think all this is possible? Autonomy is empowering, freedom of choice is empowering, doing things because you want to and can is empowering and validating beyond measure.

No mass media, you don't need to be "validated" from anyone for anything. We did not need to be validated by the Americans with the Avro Arrow. We need self esteem, yes, like, we are awesome, look what we built, we don't need anyones approval, especially from the mass media anti nation state pro globalist cultural marxism crowd that does not want anyone to experience or have any sense of nationalism, or self defence, or integrated independent self sufficient industries, especially world class Made in Canada technology.

We are building the next generation of the Avro Arrow, (CF-105 Arrow Incorporated) <https://www.CF-105Arrow.ca>, and going beyond that with even greater vision with Comeau Aerospace Inc. <https://www.comeau-aerospace.ca> because we can and want to with vision, purpose, ideals and integrity, a bold resolution to succeed, with the energy of aerospace, in addition to all kinds of other awesome things all Made in Canada.

Add to the equation, more visionary plans, defence technology, rebuilding our automotive, aerospace, marine, rail and machinery industries, our farm and agriculture industries, our mining and metal processing industries, general and advanced manufacturing industries, and yes, our private investing and private enterprise industries, which includes enterprise and national security rated personnel which are essential for any and all endeavours related to economic nationalism.

This also integrates a "pro-active economic nationalism" in enterprise. This means, not selling out the country and resources and technology, or doing business with people that want to put you out of business, counterfeit your products, sabotage your company, steal market share, bribe and payoff political, government and financial institutions and all the corresponding

"crime, treason, genocide, war and immorality" that goes with that. We can talk about it, because "we are privileged", we are also "politically correct" and each citizen has the right and responsibility to be informed, engaged and involved in, and part of the solution concerning National Economic Security, which includes everything, real money, Made in Canada defence technology and everything else. We write, talk, think and act, pro-actively, as this is the heart and soul series, of Economic Nationalism.

How is that transforming thought into reality done with Economic Nationalism? Pro-active, step by step, action by action, achievement by achievement, focus, your resolution to succeed, patience, persistence, tenacity, resourcefulness, inventing your way, deal with problems, problems are temporary, keep going forward. Achievement becomes super achievement, you get better at it, maybe you have some help along the way, it could be encouragement, ideas, inspiration, developing new skills, abilities and maybe talents and aptitudes that you never knew you had. It always involves, expressing the best of who you are, and no matter who you are, you can make a difference.

Imagine how that feels like, make a difference eh, like running full speed, playing your favourite sports, you the star, the champion, imagine that, at work, investing, building, creating art and music, totally immersed in your zone of creative endeavour, mathematics, geometry, architectural design, construction, your trade, your hobby and past time, something you do for pure exhilaration, something you enjoy. Is that intense, exciting, super charging and revitalizing to you?

Are you in your zone? Do you appreciate and benefit from people that can help you achieve your goals, as they work in their zone, with intensity, brilliant imagination, energy and vitality, with that rare excitement and enthusiasm, all out for you?

If you take a look at : <https://www.intergalactic-securities.ca> you will find something extraordinary, the idea that you can ; *“Envision, plan, build & manage anything...” for Private enterprise, entities, capital structure and securities.* Is that all out for you? Is that in the zone, is that altruistic ultra nationalist, or simply pro-active economic nationalism? It must be, since it is censored beyond measure, yet there it exists in space time, dedicated to you the individual, free enterprise, industry, Made in Canada, national defence and defence technology, in addition to a vast armada of pro-active and counter-measures against the magnitude of war vector scenarios against the nation state and economic nationalism.

Who has got your back? Who will go back to back on the battlefield with you? Support Our Troops? And who will you go back to back on the battlefield with, side by side, what is your battle? What does your investment advisor, wealth manager or financial institution or broker, if you have one, know about it? What about your pension fund, eh? You are not alone!

Yes, Support our Troops eh? Pro-active Economic Nationalism will help a whole lot ore than having a sticker on your vehicle. It starts with Made in Canada eh? Say it, do it now!

Imagine for a moment, what it would be like to be in the Canadian Armed Forces, dedicated, loyal, competent, focused, disciplined...and yet they need to go a lot further than the extra mile. Do you have any idea what it feels like for people in the Armed Forces to have to serve

a bunch of traitors in government, cultural marxists, people that sell out the country, people that sabotage, delay, defund, and choose to do nothing, be nothing, do nothing, achieve nothing, invent nothing, build nothing, ok maybe just a little bit?

Yes, where is all that Made in Canada, secure supply lines? Can you imagine, knowing how difficult it is to deal with "non-nationalists" mass media that is anti-nation state and a very real national security threat to Canada? Or what it is like to not have the resources, tools, weapons, program development or even greater vision to fulfill the Defence Mission? Or what about general and advanced manufacturing and qualified personnel to make it happen?

Imagine, what it is like to have a work in progress for defence technology and vision on an unprecedented magnitude, (contrast that with the super imposed non-nationalist, anti nation state, anti defence environment) major vehicle and weapons platforms built, to get funding and resources, to have that champion that understand technology, weapons, doctrine, and can have a field day in strategic, tactical and operational environments, in addition to industrial economic and enterprise environments?

Now, imagine a little more the reality of the wasteland that is now Canada, with political parties infiltrated, deceptive leaders and agents with treasonous agendas, subversion, treason, race genocide, the "weaponized education system" with their badge of honour as treason, race hate, people that can't do math, fractions, don't understand money, never mind physics, chemistry, biology, people that can't write cursive and not even sign their name, people with toxic bodies and minds, corrupted by zero values of cultural marxism, communism, total treason and anti-white every where? Stupid people with no basic understanding of the real war, real history, or moral integrity, even less, national security rated and combat capable. Yes, this is still heart and soul talk.

Who is pro-active in economic nationalism? You might ask that to really know, right? Looking at and knowing that many government people in political parties that are totally unfit for any form of civil service, who are against the nation state, who are active to super impose their will and ideology and government, as "enemy combatants" and "enemies foreign and domestic" and "collaborateurs" and are actually considered "national security threats"...Imagine knowing that, and not only from the general so called public intel official narrative level, the heart and soul level and the classified defence and intel agency point of view...imagine the nightmare, knowing what the real truth is about all that, and there it is.

Now, the Canadian Armed Forces has other problems to deal with. Imagine a system of procurement that is simply backwards and obsolete, a system of control that renders it practically impossible or extremely difficult, unless certain things are done in certain ways "pre-approval", like crime, treason, genocide, war, sabotage, immorality is pre-approved, future kickbacks and job security is pre-approved. The problem in defence technology procurement was identified a very long time ago, in addition to all the infiltration, subversion, sabotage and treason problems with political parties and governments by "not real Canadians" not patriots, not nationalists, which are essential to proper government and national defence, including defence technology.

Now when you are interested in economic nationalism and national defence, and believe you can be pro-active about it, you can check out : <https://www.battlegroup-301.ca> and actually do something about it, that might be a whole lot more up to speed. So next time when you read about or hear about "Support our Troops" maybe you will understand that "due to national security reasons, freedom is not free" but there is whole lot you can do personally, in private investing in private enterprise with the most dedicated, visionary and ambitious people and defence technology development. After all, looking at the past when we build massive defence technology for air, land and naval forces, it is shocking how far we have fallen, since we had it all, and the people that could have defended it did not, the prime minister of treason and mass media propaganda anti nation state cultural marxist mind control...is nothing new...and we have tolerated that garbage for too long...like about 60 years too long...it is time for something awesome, Made in Canada Awesome!

Are you that way for others? Are you responsive? Do you express interest and enthusiasm for others, are you supportive, encouraging, helpful, do you like to jump in with both feet, are you all heart and soul?

Yes, this heart and soul business is tricky eh? Everyone is different eh? Yes, and also there is common ground, what we value, what we believe in, what we dream about, what we wish for, what we work for, what we live for. What is common in the national psyche? Our tribe, our shared history, our traditional culture? Certainly we have common experience concerning Made in Canada, the war against the family, the war against free enterprise and the war against the individual.

What do you envision for Made in Canada Eh? What would you like to see Made in Canada eh? Stealth submarines, space planes, an awesome pickup truck not made with rotten metal, cheap plastic and garbage electronics? Something tough enough to put on some armour in case you need it? Cruise boats, army tanks, appliances? When was the last time you had a Made in Canada fridge? A washer and dryer? A stove? Power tools?

When we talk about Made in Canada, it includes the Canadian "ownership, voting, control" not foreign, and not by "enemy combatants" or "enemies foreign and domestic" after all we are "white nationalists eh!" Economic Nationalists! Imagine that, being accused of being a white nationalist and simply replying, "I am an Economic Nationalist that believe in Made in Canada, do you have a problem with that?" Yes I really do have a problem with the 95% of the stuff in stores NOT Made in Canada, it is considered really racist and not really inclusive, it is considered really like industrial genocide, industrial economic genocide, it is considered really like super imposed globalism, it is considered like a lot of treason and selling out the country, it is considered like a really aggressive and hateful thing to do to Canadians, no real relevant freedom of choice, and having to buy things from the enemy that is trying to kill us, defraud us, corrupt our government, change our laws, steal our technology, buy up our land and companies, liquidate entire industries and enterprise....

Can you increase your ability to identify the enemy, identify your friend and ally? Yes, certainly. As once people can identify the enemy, and the threats against economic nationalism and the individual, it will be easier for anyone to make a very valuable and mutually beneficial difference, for Canada and others. In this, the challenge and reward exists,

also to experience of the spirit of co-operation and working together, to be happy in the success of another and contribute to that success, as everyone has capabilities, resources, experience and perspective that can make all the difference.

Building an enterprise, like construction, with the right foundation and materials for a certain purpose is essential. Having private co-operatives, buying and investment group endeavours in things that are important and relevant to each person and to others, aligned with true values, family values, Made in Canada productivity and prosperity is part of the foundation, along with working share-owners, and private investor shareholder capitalism.

We envision an increase in co-operative endeavours, invest and acquire, private investment and buying group options with money and resources in trust, to neutralize the industrial genocide against Canadian manufacturing industries from retail stores and globalism.

The problematic "anti nation state anti protectionist" crowd that enables, augments and amplifies foreign product dumping in Canada, along with currency wars, and the war from a foreign sovereign government against the free enterprise and entrepreneur, and also against our government, that should be truly sovereign and armoured against corruption, treason, selling out the country and doing all kinds of things that are actually national security threats to Canada and Canadians.

We envision going forward with confidence and optimism in a new magnitude of industrial economic security, productivity and prosperity, with a greater integrated vision of new wealth producing power that invents, innovates, has OEM and co-development, and increased capacity and competence of productive enterprise, with enterprise and national security rated people.

We envision nationalists, nationalist character and vision, with an energy and enthusiasm of nation building, thoughtful intelligent and pro-active economic nationalism, pro-active patriotism, protectionism. Freedom of choice, we don't need cease and desist orders for buying from the enemy, do we? We need to rapidly invest and build, deploy resources and people, produce high quality goods and solid quality, well paying family rated jobs, careers and enterprise commerce, something to write home about, right?

In the As-Garde Technology Continuum, our vision is making more things possible with people energized with creative imagination, general and advanced machinery and technology, in addition to general and specific industries, the strategic, tactical and operational advantage is integrated. This increases productivity, prosperity, performance, for the individual and enterprise, the industry and country. "Build a new machine" is not simply more gadgets, it is part of a greater productive enterprise, wealth producing power, where people can have challenge and reward and not worry about losing their job from traitors or foreign competition.

We need to be dedicated to increasing new wealth producing power, new programs, products, services, technology, business combinations, prime contract, co-development, OEM, secure supply lines, self sufficiency...many hands make light work, and right now, it is time for all good citizens to come to the aid of their country, with national security

emergencies, to stand on guard for Canada, with Made in Canada.

You need to know, that it will take people dedicated to pro-active economic nationalism, the question remains to you the individual, how will you express the best of who you are? How will you make a difference? What will you do and what are you doing now? Will this pass into oblivion, or will you be encouraged, focused, determined...not to go through life on cruise control, or fall asleep at the wheel of economic nationalism, as the gears of industry, enterprise and investment yearn to have people that can work to build great things together, you the individual, someone with heart and soul. Energized, revitalized, productive and prosperous, challenge and adventure, discover everything awesome about Made in Canada Eh! Imagine, the future you can have by choice, powerful freedom of choice, you have it in your power, you have it in your heart and soul.
